

## **LED License Plate & Interior Cargo Area Lights**

The more visible you can make the Corvette, especially at night, the better! The only bulbs that are not LED's in the C7 are those illuminating the license plate and rear hatch. LED bulbs are available as a replacement. They provide a bright much whiter light.

### **Bulb:**

The bulb is easy to replace, just follow the instructions in the Owners Manual, which are shown on the next page.

The picture left is an LED bulb that replaces the incandicent bulb that comes with the C7. There are two, one on either side of the license plate.

## Information From Owner's Manual for License Plate Lights

To replace the bulbs:

### Passenger Side Shown, Driver Side Similar

1. Push the lamp assembly toward the right (*a small screw driver helps.*)
2. Pull the lamp assembly down to remove.

3. Turn the bulb socket (1 photo right) counterclockwise to remove it from the lamp assembly (3 photo right).

4. Pull the bulb (2 photo right) straight out of the bulb socket.

5. Push the LED replacement bulb straight into the bulb socket.

#### ***Then see below note:***

Once the polarity is correct, turn the bulb socket clockwise to install it into the lamp assembly.

6. Push the lamp assembly (3 photo right) back into position until the release tab locks into place.

### **Note: One Extra Step with an LED Bulb**

The LED bulbs are polarity dependent. If connected to the wrong polarity, they are not harmed, but will not light. Mid step 5 above, start the car and check to see if the bulb lights (there is a 50/50 chance it will not!) If it doesn't, remove the bulb and turn it 180 degrees and insert in the socket. When I installed the bulbs, one worked and one didn't – as expected! Removed the non-lite bulb, turned it 180 degrees and all was fine!

## Information for Changing Rear Cargo Area Lights

There is no mention of how to change the two rear cargo area lights or that they are also not LED's in the Owner's Manual.

These are some pics on how it is done:

	<p>The first, not so obvious thing that must be done is to remove the lenses. Turns out it is similar to the license plate light as the whole assembly comes out. Bought the LED bulbs, which appear to be the same as those for the license plates, but no instructions! They did have the polarity warning mentioned above!</p> <p>Use a small screw driver in the rear facing short lens face and the assembly will pop loose</p>
	<p>This is a pic with the housing removed.</p>
	<p>The bulb can be slide out from the holder by pushing from the bottom with a small screw driver, it is obvious when looking at the bulb.</p> <p>Be careful pressing the LED bulb in, it requires some force. Used my two thumbnails on the edge of the bulb base and not the top LED.</p>

With the same lighting, tried to show the difference between the incandescent and LED bulbs.

This is the original incandescent.

Was lucky, both bulbs lit with the first try, a 50% probability!

This is the LED lite after the bulb and holder were pressed back into the rear compartment.

Not as a dramatic a difference compared to the license plate bulbs, but noticeable.

Other 2017 Grand Sport & 2014 Stingray PDF's Available:

*Some 40 items discuss improvements or information about a 2017 Grand Sport and 2014 Stingray function and/or esthetics. Some are minor and others, like the installing ceramic brake pads, include detailed install information.*
